Modular Humidity and Temperature Sensor

EE212

Modular Humidity/Temperature Sensor

The EE212 humidity (RH) and temperature (T) sensor with interchangeable sensing module is optimized for demanding climate control applications in most various industries.

Versatility

The EE212 is available for wall or duct mount as well as an outdoor version. It features two analogue outputs as well as a BACnet MS/TP or Modbus RTU interface and optional graphic display. Besides the accurate RH and T measurement, the sensor calculates various humidity related parameters such as dew point temperature, absolute humidity and mixing ratio.

Outstanding Reliability with Patented Sensor Technology

The E+E sensing element with proprietary coating, the wide choice of filter caps and the IP65/NEMA 4X enclosure ensure excellent long-term performance of EE212 even under challenging working conditions. Easy on-site replacement of the sensing module minimises the down-time for maintenance purposes in heavily polluted or aggressive environment.

Interchangeable, Robust Sensing Module

The injection-moulded module inside the sensing head is mechanically highly stable and easy to handle. The sensing module with rapidX technology enables quick replacement without tools at any time, even during operation (hot-swap). The electronics inside the module is encapsulated and therefore best protected against condensation.

User Configurable and Adjustable

The free EE-PCS Product Configuration Software and an optional adapter cable facilitate the configuration and adjustment of the EE212. The configuration includes the measurands assignment (two on the outputs and up to three on the display), the output scaling, RS485 interface settings and the display setup.

EE212 for wall mounting

EE212 outdoor

Features

Knockout for ½" conduit fitting (US)

External mounting holes

- Mounting with closed cover
- Electronics protected against construction site pollution
- Easy and fast mounting

Enclosure

- IP65/NEMA 4X
- Protection against contamination and condensation
- Minimal installation costs
- Type T13 compatible with radiation shield HA010501

Display

- Configurable display layout
- Measurands freely selectable

Bayonet Screws

- Open/close with a ¼ rotation

Smooth cover surface

- No accumulation of dust in protruding edges

Electronics on the underside of the PCB

- Optimum protection against mechanical damage during installation

EE212M calibrated sensing module

- State-of-the-art E+E RH/T sensing element with proprietary coating and sealed solder pads
- Patented sensor technology
- Quick exchange with rapidX technology
- Hot-swap capable
- High mechanical stability
- Easy handling

Inspection certificate

according to DIN EN 10204-3.1

Test report

according to DIN EN 10204-2.2

Features

Protective Sensor Coating

The E+E proprietary sensor coating is a protective layer applied to the active surface of the sensing element. The coating substantially extends sensor lifetime and ensures optimal measurement performance in corrosive environment (salts, off-shore applications). Additionally, it improves the sensors' long term stability in dusty, dirty or oily applications by preventing stray impedance caused by deposits on the active sensor surface.
